

REMARKS

Reconsideration of Applicant's Claims is respectfully requested.

Applicant's Claims 9 and 10 define a pivotal cable support with a cradle member that is mounted for rotational movement only. Also, the cradle member includes an under support taking the form of a frame with cross members and posts. This construction provides rigidity while being light weight. Also, both the receptacle 32 and the opening 33 have vertical spaced-apart axis in fixed parallel relationship. Rotation of the cradle member is about a vertical axis.

This combination of features are not found in the primary reference of O'BRIEN nor in the secondary reference.

Therefore, it is respectfully requested that Claims 9 and 10 be allowed. Enclosed is a new Declaration, as required.

Respectfully submitted,

\_\_\_\_\_  
ROGER A. MARRS  
Attorney for Applicant
